

PROFESSIONAL SUMMARY

I am a motivated B.Tech student with hands-on experience in Machine Learning, Cybersecurity, and Web Development. Through various academic and personal projects, I have developed strong problem-solving, programming, and analytical skills. I am passionate about leveraging technology to create innovative, secure, and impactful solutions while continuously expanding my technical knowledge

KEY EXPERTISE

CyberSecurity Ethical Hacking Network Security Computer Networking Machine Learning Risk Assessment
Risk Analysis Digital Forensics Python Java Security Incident Response

EDUCATION

RV University B.Tech. - CSE - Cyber Security CGPA: 7.37 / 10	2023 - 2027
vikas pu college , airport road konchaodi , Mangalore DK DT 575008, Mangalore 12 th PUE Karnataka Percentage: 88.33 / 100	2023
Sri Chaitanya Tecno School Mangalore Karnataka, Mangalore 10 th CBSE Percentage: 66.80 / 100	2021

INTERNSHIPS

KIOCL Ltd Government / PSU / Defence	01 Jun, 2026 - 30 Jun, 2026
Key Skills: Application Security Security Monitoring & Dashboards Endpoint Security Firewall Management Network Security	
Completed an internship focused on enterprise cybersecurity concepts, gaining practical exposure to endpoint security, firewall management, and security monitoring dashboards. Learned how organizations protect endpoint devices from cyber threats, configure and monitor firewall policies to regulate network traffic, and use security dashboards to track system health, detect security incidents, and monitor network activity. Developed an understanding of fundamental cybersecurity practices, network security controls, threat monitoring, and incident awareness within an enterprise IT environment.	

PROJECTS

Secure File Sharing With Hybrid Encryption Mentor: Prof Aisiri K S Team Size: 4 Key Skills: Hybrid Encryption Access Control Tokenisation AES RSA JWT Project Link: https://github.com/Abhishekkarnam/secure-file-sharing.git In this project the secure file sharing system allows users to securely store files in one place and at the same time demonstrating realistic attacks in the system. Unlike many systems out there where they treat security and the threats as black box systems, this system is not only securing your files using a hybrid cryptography which uses AES and RSA for encrypting and securing the file and the key, it also demonstrates the real-time attacks that occur in our environment and how it is being protected.	03 Feb, 2026 - 25 May, 2026
Real-Time Insider Threat Detection Using Network Behavior Profiling Mentor: Prof Sunil Kumar Team Size: 4 Key Skills: Network Security Computer Networking Project Link: https://github.com/Abhishekkarnam/real-time-insider-threat-detection.git Insider threats are difficult to detect because the attacker is often a legitimate user. Instead of relying only on signatures or blacklists, this project builds a behavior profile for each user and raises alerts when activity becomes unusual. Examples of suspicious behavior include: Logging in at unusual hours Connecting to rarely used destinations	

Sudden spikes in upload volume
Abnormal access frequency
New device or source IP changes

Analysis and Prediction of Video Game Sales using Machine Learning Algorithms

Team Size: 4

Key Skills: Machine Learning Data Analysis NumPy

Project Link: <https://github.com/Abhishekkarnam/Video-Games-Sales-Prediction-.git>

This project focuses on analyzing and predicting the sales of video games using various machine learning algorithms. The dataset includes game features such as platform, genre, regional sales, and global sales. We used regression and classification models to gain insights and predict success based on sales performance.

SEMINARS / TRAININGS / WORKSHOPS

Cyber-Sanctum 2025 Institute Name: RV University 21 Nov, 2025 - 21 Nov, 2025

Key Skills:

Log Analysis Security Monitoring Malware Detection Threat Detection Reverse Shell Attack Alert Generation
Security Event Analysis

Malware Attack Detection and Response Using Splunk: Conducted a cybersecurity seminar project involving the simulation of a malware attack in a controlled virtual lab using Kali Linux and Windows 10. Configured Splunk Enterprise and Sysmon to collect, monitor, and analyze system event logs for real-time threat detection. Generated and executed a simulated malware payload using MSFVenom and Metasploit, investigated security events through log analysis and visualization, and demonstrated practical concepts of SIEM, endpoint monitoring, incident response, threat detection, and security analytics.

Commit to Cloud: GitHub & Hosting Simplified 03 Feb, 2025 - 03 Feb, 2025

Institute Name: RV University

Key Skills: Hosting Cloud Git GitHub

Participated in the Commit to Cloud: GitHub & Hosting Simplified workshop at RV University, developing practical skills in Git, GitHub, version control, repository management, and cloud-based application hosting.

EXTRA CURRICULAR ACTIVITIES

- Photography
- Team collaboration through RC Aircraft Project activity

PERSONAL INTERESTS / HOBBIES

- Cooking
- Hiking
